**LL1583**

**Small Size Splitting Transformer**

In many splitting applications, the splitting transformer must have a high immunity to input common mode signals, to stray magnetic fields from e.g. power transformers and to large ground potential differences in receiving systems. In the design of the LL1583, we have used our well established two coil structure to create a transformer with a high degree of symmetry. The transformer is built up from two primary windings (which should be used in parallel) and two secondary windings. Each secondary winding is built up from two sections, one from each coil. Its own electrostatic shields surround each secondary section. The symmetric structure results in an internal cancellation of noise signals caused by external magnetic field. It also increases immunity to ground noise between secondary systems and reduces the effects of input common mode signals.

The transformer is housed in a mu-metal can and is impregnated in solventless epoxy resin.

**Pin layout (viewed from component side) and (simplified) winding schematics:**

**Spacing between pins**
- 2.54 mm (0.1”)

**Spacing between rows of pins**
- 20.32 mm (0.8”)

**Recommended PCB hole diameter:**
- 1.3 mm

| Dimensions (Max. L x W x H above PCB(mm)) | 28 x 17 x 15 |
| Weight: | 25 g |
| Static resistance of primary (in parallel): | 56 Ω |
| Static resistance of each secondary (Pins 10 to 7 and pins 6 to 9): | 95 and 130 Ω |
| Self resonance point: | > 200 kHz |
| Distortion: | 0.1% @ -2 dBU, 50 Hz |
| | 1 % < @ 8 dBU, 50 Hz |
| Frequency response (Ref: -6 dBu, 1kHz): | 10 Hz -- 120 kHz +/- 0.5 dB |
| Test arrangement: Parallel input - parallel output. Source 150Ω, load 10 kΩ | |
| CMRR at 20 kHz (Source 600 ohms, load 2 x 10k) | > 60 dB |
| CMRR at 20 kHz from sec. to sec. (Source 600 ohms, load 2 x 10k) | > 40 dB |
| Isolation test primary - secondary / secondary - secondary / E1 - E2 | 4 kV / 2 kV / 1 kV RMS |

Application example: Component side view.

Primary signal from microphone cable, with or without phantom power.

Splitting 1: 1 + 1

Secondaries can be connected individually. (Function does not require that both secondaries are connected/used)

NOTE! Pins 1 and 3 must be connected!
LL1583 application example.

1 + 2 Out Splitting box

On stage mic.

Before connecting splitting box

With splitting box

Ideally, SW1 and SW2 should be open.

If, however, pin 8 and/or pin 5 do not receive ground reference from Monitor desk or from Recording truck, close SW1 and/or SW2

Front house desk. With phantom power supply

Front house desk. With phantom power supply
