

L-brackets for upright transformer mounting

This range of L-brackets is designed to allow transformers to be mounted in an upright position instead of the standard flat orientation. Available in three sizes, they accommodate a wide range of transformer models. With pre-drilled holes matching our transformer footprints and threaded M4 holes in the base, the brackets offer a simple, secure, and convenient mounting solution.

An additional hole in the short side of the bracket allows connection wires to be routed through when needed, providing extra flexibility in installation.

The brackets are suitable for transformer sizes of 0.75kg, 1.35kg and 2.5kg

Order information

For 0.75kg size	L-bracket_1660
For 1.35kg size	L-bracket_1638
For 2.5kg size	L-bracket_1620
